Summary

I am a recent graduate from Boise State University majoring in Computer Science with an emphasis on Cyber Security. I am currently pursuing a full-time job. My main areas of interest include Web Development, Software Development, and Software Engineering and Networking Engineering. My undergraduate projects mainly involved programming using **Java language** with Eclipse and IntelliJ. I also have developed great expertise in various programming languages such as MySQL, HTML, CSS, PHP, C++, C#, Python, and Asp.net.

Education

BACHELOR OF SCIENCE | AUGUST 2020 | BOISE STATE UNIVERSITY

- **Major:** Computer Science
- **Minor:** Cyber Security
- **Related coursework:** Introduction to Java, Introduction to Data Structure and Linked Lists, Data Structures, Algorithms, Theory of Computation, Computer Security, Intro to Web Development, Software Engineering, Programming Languages, Scrum and Agile Development, Database, and Senior Design Project.

Technical Skills

***APPLICATION DEVELOPMENT**

- Adept in C, C++, C#, Java, shell scripting, and .NET frameworks.
- Intermediate in various development environments including Linux and VMware workstations
- Intermediate in Subversion, Git, LATEX, and various management development tools.
- Familiar with Scheme, Prolog, GoLang, and Smalltalk.
- Great understanding of Python libraries and some package dependencies.

DATABASE

- Relational databases experience in MySQL and SQL Server.
- Experienced in Storing procedures, connecting databases to applications, and Schema design

WEB DEVELOPMENT

- Great understanding of PHP 5, JavaScript, CSS, HTML, and dependency programming tools such as JSON.
- Good understanding of Apache, Wamp Server, and Heroku app.
- Basic understanding of JavaScript frameworks such as Node, and jQuery.

Projects

- **Some project samples I have worked on were:**
- GUI playlist ; set up a bash shell script; manipulate data storing using b-tree and hash tables; Create my own website and host it accompanied by back end database.
- Perform Restore, backup,insert, update and also set up user privileges for every role in database application.

Course Works

- **Data Structures and Algorithms:** Learning about Linked lists, arrays, trees, graphs, Hash tables, and Algorithm efficiencies
- **Software Engineering:** Dig into real-world projects and find out how to modify the codes in that scale, Scrum development process, and Advanced Git Commands
- **Programming languages:** Giving flexibility to switch between different programs, work with Compiling and interpreting languages

Job Experience

WEB DEVELOPER| CLUB TRAX | SUMMER 2022-FALL 2023|

- Design the website's front end based on the project requirement.
- Setting up the server on nodeJS and using the preformatted templates to generate the web pages of websites. (Sample project on my git as NodeJS repository)
- Design responsive pages based on client needs and adjusting them to the sales report needs.
-

PROGRAMMING INSTRUCTOR | CODING4YOUTH | SUMMER 2017

- Teaching online courses to elementary or high school children including Scratch, java (Greenfoot), and C++.
- Teaching remote programming to students using Google Hangout.

PROGRAMMING INSTRUCTOR | AIGOLEARNING | AUG 2021

- Instructing the courses assigned through Discord.
